

# Sesam 800 Mobile

High performance radio remote control system for mobile applications; winches for ATV's and forest machines, tail lifts etc. A flexible and simple system based on modern digital technology.

- Developed for extreme environments where there are high demands on shock and vibration sensitivity
- Waterproof design on transmitter and receiver (IP67)
- 12-channel automatic frequency selection
- Duplex (two-way radio) which enables a relay feedback indicator on the transmitter
- Five movements via one main relay
- One extra non-movement function
- Very fast function response time
- Receiver with glass-reinforced plastic housing and a protective vent membrane
- Transmitter in shock-durable and modern design
- Highly durable long-life push-buttons, over 1000000 cycles momentary

Åkerströms Björbo AB is an international company founded in 1918 that develops, produces, markets, and services robust products for radio remote control of industrial cranes, mobile applications, door-opening systems, and locomotives.
